Leibniz Research Alliance Science 2.0

Science 2.0 is concerned with the use of modern internet technologies in all stages of research

Social media tools and platforms are finding their way into science and will fundamentally change existing research and publishing processes:

- New ways for collaboration
- Easier communication
- Participation in research processes
- More transparency and open discourse

The transdisciplinary Leibniz Research Alliance Science 2.0 examines the effects of Science 2.0 on scientific research and society

New Working Habits
How do social media change research and publishing processes in various scientific disciplines?

Technological Development
How can Science 2.0 and its associated tools support existent research processes?

User Behaviour Research
What new forms of scientific communication does Science 2.0 enable and how are the necessary tools used?
