

# Open Science Angle Throughout the Research Process

From Open Science Policies to Actions at the University of Turku, Finland.

PhD. Mari Riipinen Head of Research Development Unit, University of Turku, Finland

# AGENDA

- Open Science: making and braking the structures of research
- Open Science: global megatrend in the research arena
- OpenUTU: creating the open science policies and support at the University of Turku, Finland
- Results: Researchers' reactions and actions

# OPEN SCIENCE MAKING AND BRAKING THE STRUCTURES OF RESEARH

# WHAT IS OPEN SCIENCE

**Umbrella concept** for opening research outputs

- **publications / data / research methods and technologies / whole research process transparent ... open innovation / citizen science**

**Digitalization of research**

- **Digital technologies** constitute the technical foundation for the contemporary form of open science, allowing scientists to share knowledge and to collaborate in ways that were not possible before (Meyer and Schroeder, 2013)

The aim is to make knowledge resources **accessible, searchable, and reusable** and increase the chances of discovering previously unseen connections

- **impact** to the society / scientific **novelties** / inventions and revolutions / enable fast **innovation** processes

# JOURNAL SYSTEM AND TECHNOLOGY MOUNTING THE OPENNESS OF RESEARCH

- At large the concept of open science is actually nothing new.
  - Creation of scientific **journal system** has aimed at opening science since seventeenth century
  - **Internet** has enabled opening science since 1990's onwards
  - **Recent technological developments** have added a new dimension to open science

"-- no one ought to publish --, without lodging a -- well bound manuscript copy of all -- data in some place where it should be accessible, under reasonable restrictions, to those who desire to verify his work." Francis Galton (1901), Biometrika 1(1)7-10. [tinyurl.com/y2zf7j6e](https://tinyurl.com/y2zf7j6e)

#openata

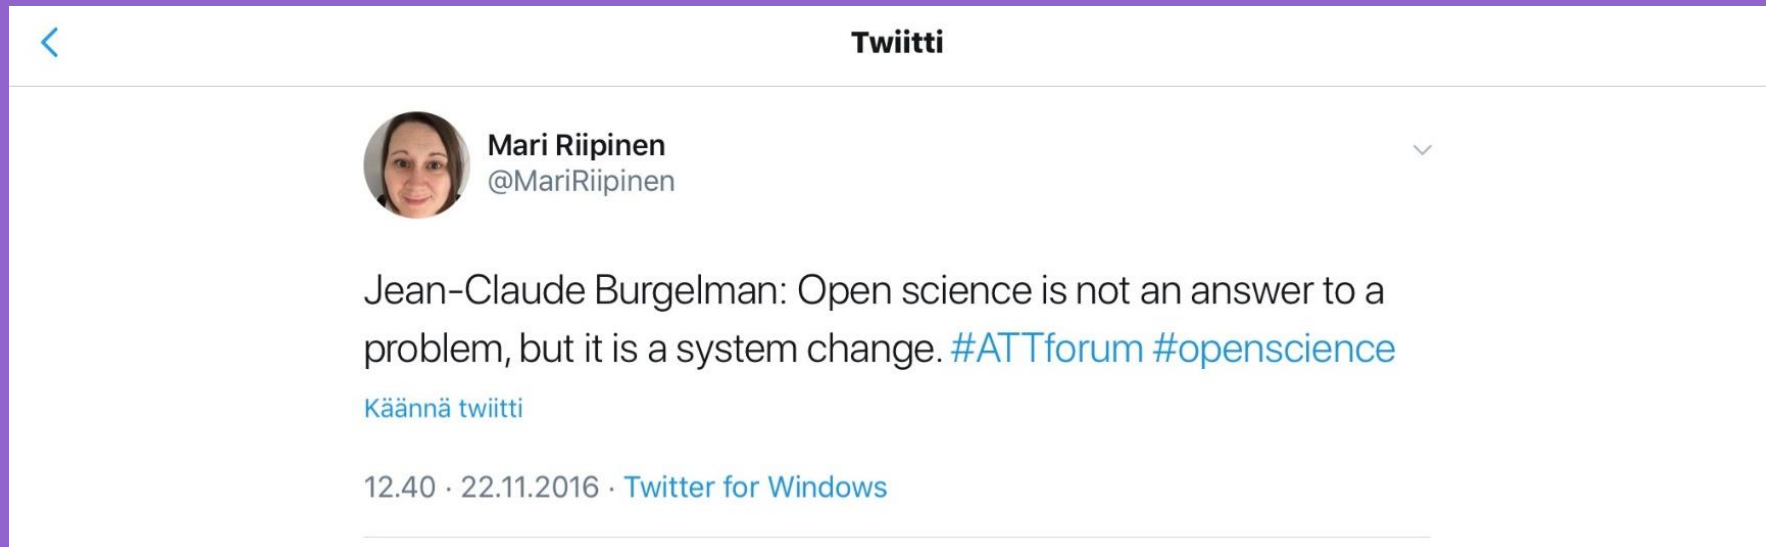

# NARROW WAY OF MEASURING (OPENNESS OF) RESEARCH AND RESEARCHERS

- We have created structures (and indicators) to measure, indicate and evaluate the science
  - Most valued research merit to researcher, department, faculty, university comes from the **scientific publications**
  - Number and quality standards of publications, citations to journals or individual articles and people
- This has created a situation where researchers want to and perhaps need to protect their research results as well as research methods and data **until they are published** in a peer reviewed article
  - Limits opening of the other outputs of science?
- **Has the journal system turned against the original aim?**

# RETHINKING

- Open Science in it's broader understanding is a way to **value** and perhaps measure **the science throughout the research process** and beyond
  - datasets, open notebook, open methods, open peer review, open collaboration, open innovation, citizen science etc.
  - What is a merit in research and how is it valued and measured?

# OPEN SCIENCE MEGATREND IN RESEARCH ARENA

## Open Science across the programme

### Open Science

Better dissemination and exploitation of R&I results and support to active engagement of society

- **Mandatory Open Access to publications:** beneficiaries must ensure the existence of sufficient rights to comply with open access requirements
- **Mandatory Data Management Plan for FAIR (Findable, Accessible, Interoperable, Re-usable) and Open Research Data :** for all research data with possibilities to opt-out from open access requirements

- Support to researcher skills in and reward systems for open science
- Use of European Open Science Cloud

# DORA

## San Francisco Declaration on Research Assessment

... to improve the ways in which the output of scientific research is evaluated

There is a pressing need to improve the ways in which the output of scientific research is evaluated by funding agencies, academic institutions, and other parties. To address this issue, a group of editors and publishers of scholarly journals met during the Annual Meeting of The American Society for Cell Biology (ASCB) in San Francisco, CA, on December 16, 2012. The group developed a set of recommendations, referred to as the San Francisco Declaration on Research Assessment. We invite interested parties across all scientific disciplines to indicate their support by adding their names to this Declaration.

The outputs from scientific research are many and varied, including: research articles reporting new knowledge, data, reagents, and software; intellectual property; and highly trained young scientists. Funding agencies, institutions that employ scientists, and scientists themselves, all have a desire, and need, to assess the quality and impact of scientific outputs. It is thus imperative that scientific output is measured accurately and evaluated wisely.
